Technology

Majority of the production lines are GORE-TEX certified

GORE-TEX footwear design passed Strict testing of Gore equipment ensures optimal performance

Each square inch of GORE-TEX film contains 9bn micro pores that are 20,000x smaller than a water drop

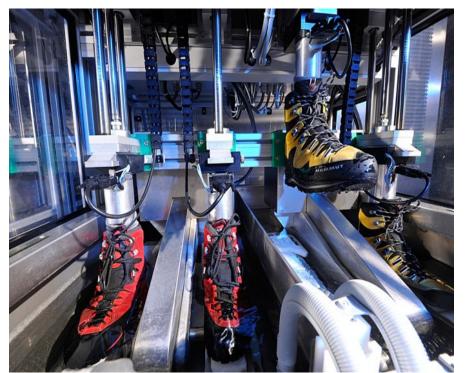

Each micro pore is 700x larger than a water vapor molecule which allows the vapor to easily pass through

The design of the GORE-TEX film blocks out the wind

The Walking Simulator

The Walking Simulator tests the waterproof performance of GORE-TEX® footwear. Test shoes are placed on flexible foot forms equipped with moisture sensors that are subject up to 200,000 steps in a water bath. If moisture enters the shoe, the testing stops and the sensor indicates the source of the leak. The shoe or boot must then be modified and submitted for another round of testing, to prove that they meet the rigorous GORE-TEX® footwear standards.

The Wicking Test

The GORE-TEX® lining isn't the only component in footwear that ensures durable waterproofness. Materials used in the upper must also be non-wicking to prevent water from being transported into the shoe or boot over the GORE-TEX® lining. That's why we test all upper components from the shoe's leather and foam to the stitching and laces to ensure that the whole shoe or boot meets the waterproof performance standards.

The Centrifugal Tester

Boots filled with water are spun at high speeds. The resulting pressure forces water through even the smallest of holes to discover leaks. These tests are performed at every GORE-TEX® certified factory.

The Comfort Test

Breathability is not only a feature of the GORE-TEX® membrane. All materials used, from the lining through to the outer material, contribute to the high breathability and climate comfort of GORE-TEX® Footwear. In the Comfort Test the entire shoe is tested for breathability which ensures that all components are working together to deliver climate comfort in the intended use.

□ Cutting

- -Atuo oscillating cutting machine
- -Auto die-cutting machine

☐ Stitching & Upper process

- -3D computer stitching
- -Auto punching machine

□ Insole & Printing

- -Auto heat transfer machine
- -Auto Silk-printing machine
- -Auto Gauge-line marking machine

□ Outsole factory

- -Rotary RB CMP molding machine
- -Rotary EVA hot/cold molding machine

☐ Stitching & Upper process

- -Computer stitching w/ auto jig-exchange
- -Auto pick/place robot system (robot application)

☐ Assembly(Robot application)

- -Auto upper cementing line
- -Auto outsole cementing line
- -Plasma application

□ Outsole factory

- -Nitrogen trimming machine
- -PANSTONE RB Injection machine

□ Assembly

- -PU pouring technology
- □ **VR** sampling
- Warehouse
 - -Sample material warehouse RFID application
- ☐ Big data application
 - -JarviX, big data analysis & application
